

# Interview Invite

## Providing Insight into the Development of a Specialist Digital Health Toolkit

### Overview of the Project

KPMG has been engaged by the Australian Digital Health Agency (the Agency) to develop an evidence-based Medical Specialist Toolkit which aims to improve the Australian medical workforce's capabilities in relation to digital health. This Toolkit will be developed with a focus on cardiologists and surgeons in private practice. Practice Managers have also been included as a target group of the Toolkit, as they are key to supporting digital capability and the adoption of emerging technologies.

### Initial Stakeholder Engagement

As a part of the development process, KPMG is conducting interviews with a range of stakeholders involved in specialist care. The purpose of these consultations is to gain insight into the ways in which the Toolkit can best support digital health adoption across both specialist groups and practice managers. Questions will cover:

- Current level of maturity and adoption of Telehealth, ePrescribing, Secure Messaging, and My Health Record in practice;
- Base maturity of digital literacy around foundational topics such as data privacy, data security, and interoperability;
- Key barriers or areas of resistance to the adoption of digital health technologies;
- Toolkit delivery methods and modalities that support digital health adoption; and
- Types of resources that are going to be most beneficial.

### Interview Details

The interview will last a maximum of one hour in duration, and can be completed over the phone or through software that enables video-conferencing, such as Skype or Microsoft Teams.
